Hepatitis C is a virus which can cause inflammation of the liver and liver damage.

Hepatitis C is a chronic illness that can be managed. Some of the main symptoms are fatigue, nausea, itchy skin, depression and digestive problems.

You can only get the virus when infected blood enters your blood stream. The point of entry for infected blood can be a fresh cut or broken or punctured skin.

There is treatment for hepatitis C.

To avoid hepatitis C don't share injecting, tattooing or piercing equipment, or any other item that may be contaminated with blood.
