What postgrad for you?

“Learning the career you want to pursue”

Choosing which postgraduate study to undertake can be a difficult decision to make as there are many factors to look into when making the choice. For instance: where to study, how much it will cost, how much time do you have to give towards your next degree and most importantly what you will study.

In order to help simplify these factors you need to have a clear career goal when it comes to making these decisions.

Not everyone who completes their undergraduate degree actually wants to go into that field of profession. An undergraduate degree it is all about learning and exploring where you want to go in life. But with a postgraduate degree usually it is specifically about learning the career you want to pursue.

With all the hard research that you put into looking at postgraduate study you will see that it is a more involved type of study. As said above, for those who are commencing a postgraduate degree for career purposes it requires you to know what exactly you want to get out of your next chapter in university life as it can be very costly and time consuming.

So if you are keen for a challenge and have not partied away your brain cells during your years of undergraduate studies, here are a few things to consider in order to help get you on track with finding what postgraduate study is best for you.

You need to decide which type of postgraduate studies you are more suited towards, the main two being a master's degree or a doctorate. A master's degree is offered in around 30 fields of study, takes between one to three years and can be either professional or academic. A doctorate is the highest academic degree, such as a MD (Doctor of medicine) or a PhD (Doctor of Philosophy) and can take from anywhere of three to six years to complete.

Postgraduate study is time consuming, you need to pick a degree that best fits within your schedule, not anyone else's. If you lead a busy life look for universities that offer full or part time postgraduate study. Remember, you do not have to stay at the same university that you completed your undergraduate at if you do not wish.

Along with deciding on full or part time study, decide whether it is best for you to complete it either on-campus or by distance education online. Distance education is now a popular way for students to do the degree they want to do without having to uproot themselves from their lives. By considering doing it by distance you just might find a degree that is the best fit for you, one you would not have had a chance to complete some twenty years ago.

The bottom line is look for a postgraduate degree that is going to work for you, one that will give you the most out of your time. You are the only person who knows what degree is best for you, so do your research, look at all possibilities and make the decision that will take you towards what you want to achieve out of university.
